

Winter Weather Expected Today

OVERVIEW

Light snow is expected to overspread the area mid-morning. The greatest threat for snowfall is across eastern Long Island. The evening commute may be impacted.

TONIGHT INTO MONDAY

- **Snow Accumulation** - A Trace to around an inch across NYC, the northern portions of NJ, Lower Hudson Valley and interior Southern CT.
 - Elsewhere, east of the NYC metro, 1-2" is expected.
 - Suffolk County on Long Island is expected to see 1-3" with local amounts up to 4" on the East End.
- **Timing** – Beginning from west to east from 9 AM – 12PM. Light snow is expected to pull away from the area by late afternoon and evening, generally from 4 – 7 PM.
- **Impacts** - This may result in hazardous travel during the day and possibly for the evening commute.

FORECAST UNCERTAINTY

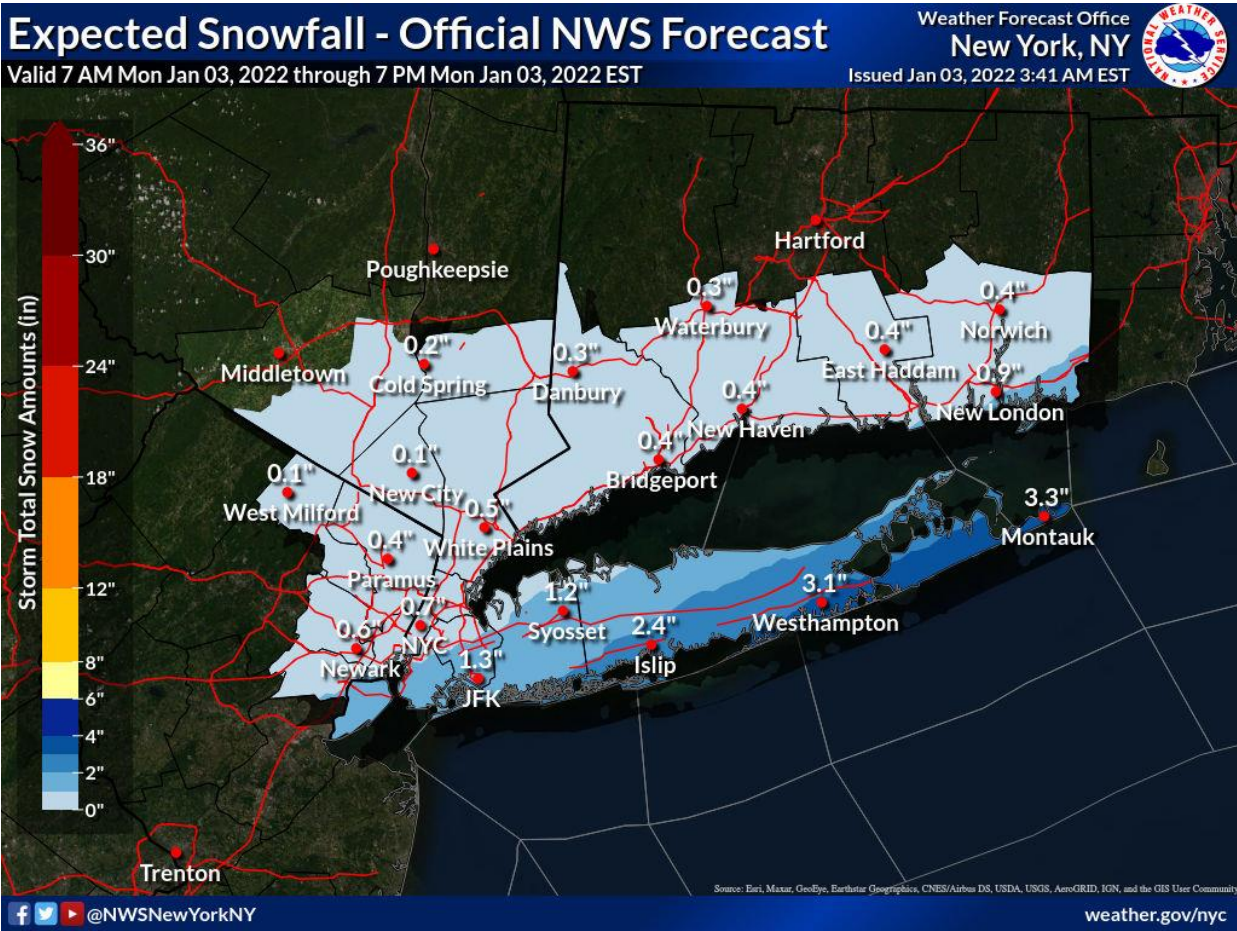

- A track further to the north of the system would bring more snow to the area. Conversely, a track further south would bring less snowfall.
- A closer approach to the area may result in heavy snow bands nearing the area which may produce brief periods of 1" per hour snowfall rates. This low threat is mainly for Eastern Long Island.

NWS ALERTS

- Winter Weather Advisory in effect from 9 AM to 7 PM for portions of Suffolk County on Long Island.

NEXT BRIEF

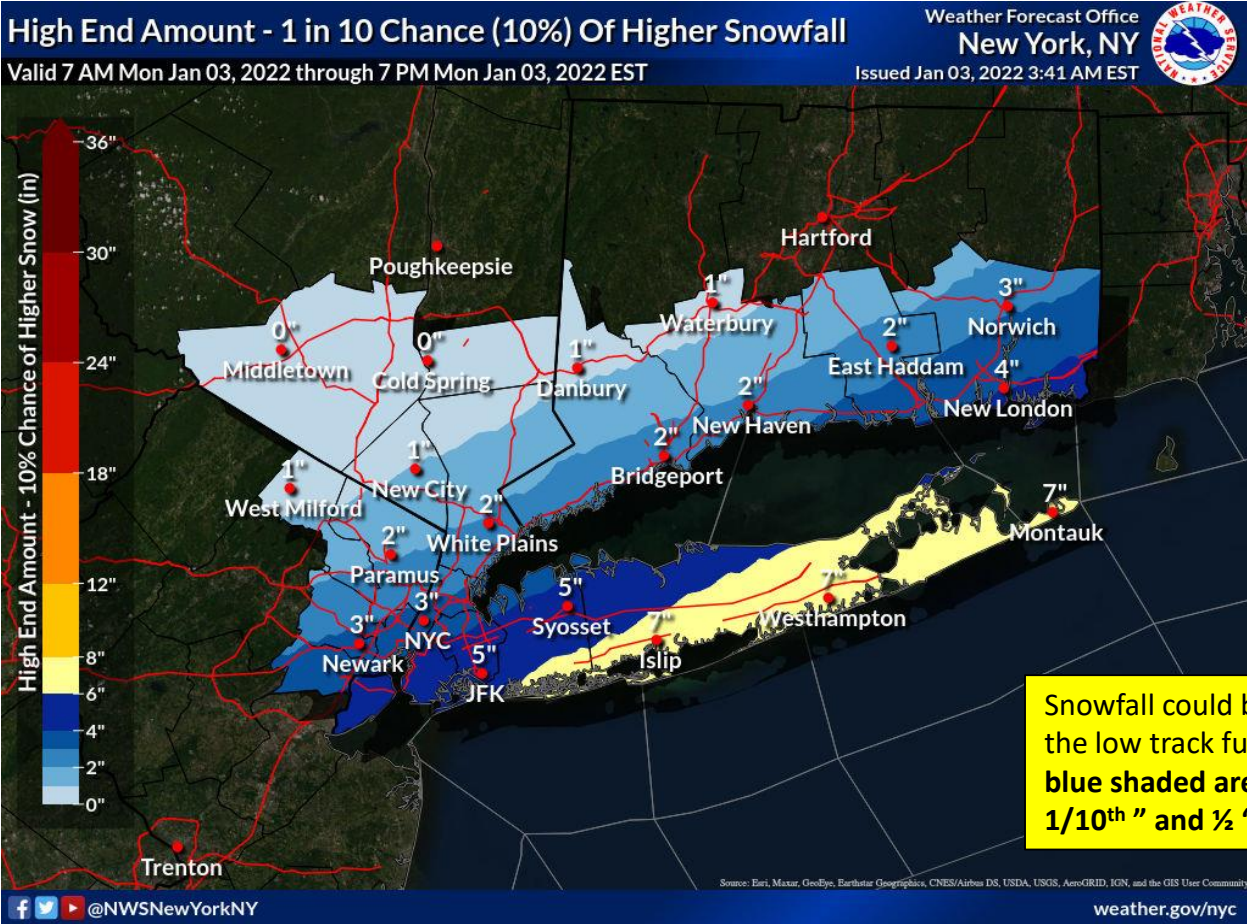

- This is the final briefing.
